

PIZZA SALES

A Delicious Journey

About the Project

This project is a Pizza Sales Analysis created using SQL. It helps to understand customer behavior, popular pizzas, and sales performance.

The data is taken from four tables — Orders, Order Details, Pizzas, and Pizza Types — which together provide complete information about each order.

Using SQL queries, we analyze trends like best-selling pizzas, order patterns, and revenue to gain useful business insights.

Retrieve the total number of orders placed .

```
select  
    count(order_id) as total_orders
